DETAILED ACTION

This Office Action is in response to the Election filed on July 26, 2002.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: **101** and **103a** in Figure 16. A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prior Art Figures 15-17 in view of Hanyu et al. (5,835,248).

Prior Art Figures 15-17 teach a semiconductor device comprising: a plurality of wiring layers **103** disposed in parallel so as to be close to each other with a gap on a base layer **101** which is either a semiconductor layer or a conductive layer, wherein the plurality of wiring layers are a transfer gate serving as a word line, and a plug interconnection is a polypad **104a** & **104b**; conductive polysilicon material containing an impurity; and an insulating layer **108** disposed as to bury the gap and cover the wiring layers. However, Prior Art Figures 15-17 fail to teach a short-circuit preventing insulating film. Hanyu et al. teach a silicon oxide short-circuit preventing insulating films **2013a** & **2013b** (col. 33, lines 49-56). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the structure of Prior Art Figures 15-17 with the short-circuit preventing insulating films of Hanyu et al. to improve the production process of the device.
